

Environmental Sustainability Acoustics

FUNDAMENTAL RIGHTS

Civil Non-Profit Association Environmental
Acoustic Monitor

Sustainable Development Goals

This brief publication is the result of a more extensive research, to be published, which collated some of the main discussions around the theme of environmental noise pollution, at national and international level.

From the sources, it is worth highlighting, at least, the recent approval of the *Rights to Clean, Healthy and Sustainable Environment*, by the UN (res. no. 76, 2022), and the set of fundamental rights of protection of people in the *Brazilian Federal Constitution*, with emphasis on the Federal Laws no. 9.605/1998, no. 9.795/1999, no. 10.650/2003, no. 13.186/2015, in addition to the *Consumer Protection Code* and the *Consolidation of Labor Laws*, arts. 190 and 191, 192. In addition, we must thank the tireless Ericson Scorsim for the publication, which shall be called *Smart, Healthy and Sustainable Condominiums*, whose research is the soil and seed of this initiative.

The biggest challenge is to gather the vast literature on some fundamental points, at the risk of inaccuracy. But, like everything that aims to practice, we remain resolute in the purpose of offering, rather a material always under review, but with academic rigor, than add a point to the status quo, where each and every one continues, at last, to its own account.

Environmental Anti-Noise Association

Curitiba, April 2023
